PROFESSIONAL SUMMARY

Results-driven engineering executive with 20+ years orchestrating full-stack platform architecture and scaled distributed systems for millions of users. Demonstrated expertise translating enterprise strategy into measurable outcomes: 85% reduction in operational costs, 90% acceleration of delivery cycles, and \$100M+ in revenue-enabling initiatives. Proven track record building and scaling high-performing organizations (0 to 100+ engineers), architecting mission-critical microservices and event-driven systems, and driving transformative technology initiatives across Fortune 500 and high-growth enterprises.

CORE COMPETENCIES

Leadership: Organizational Design & Scaling • Scrum Team Management (3+ teams) • Strategic Platform Vision & Roadmapping • Executive Coaching & Staff Development • Stakeholder Alignment • Change Management

Technical Architecture: Microservices & Distributed Systems • Event-Driven Architecture (Kafka) • Cloud Infrastructure (AWS) • API Design (GraphQL, REST) • Mobile Development (React, Ionic, Capacitor) • Backend Platforms (Node.js, Java Spring Boot, Python) • Data & Persistence (MongoDB) • Container Orchestration (Kubernetes) • CI/CD & DevOps

AI & Emerging Technologies: LLM Integration • Claude • ChatGPT • Windsurf • Cursor.ai • AI-Driven Automation • Production Observability & Reliability Engineering

PROFESSIONAL EXPERIENCE

Senior Engineering Manager – Post Purchases Platform | Lowe's, NC

June 2025 – Present | Managing 3 scrum teams with 20+ engineers

- Eliminated vendor dependency for device rental infrastructure by architecting an in-house mobile device management platform, delivering \$4M annual cost savings and 50% efficiency gains in physical inventory audit operations
- Engineered AI-powered automation solution leveraging LLMs to reduce troubleshooting effort by 80% and operational support tickets by 85%, delivering \$2M+ in annual cost avoidance
- Developed an LLM-powered knowledge system serving 10,000+ store associates; achieved a 45% improvement in first-contact resolution and a 35% reduction in escalations
- Delivered a real-time observability platform enabling 200+ operational stakeholders to diagnose and resolve incidents in under 5 minutes—6x faster than legacy processes
- Designed event-driven infrastructure using Kafka processing 100k+ daily transactions, serving post-purchase operations across all retail locations
- Established technical standards across full-stack architecture (React, Ionic, Node.js, Java); mentored 5+ engineers into senior technical leadership roles

Director of Software Engineering – Platform Modernization | Greenlight Financial Technology

2023 – 2024 | Managed engineering teams across 3 product pods serving 50,000+ active customers

- Spearheaded platform modernization initiative transforming monolithic architecture into microservices; achieved 5x release velocity improvement (monthly to daily cadence) and supported 3x customer acquisition growth (15k to 45k monthly onboarding)
- Deployed GraphQL-based server-driven UI architecture, decoupling frontend from backend releases and reducing feature delivery cycles by 40% while improving developer productivity by 30%
- Implemented Kafka-driven event streaming and enterprise CI/CD infrastructure; compressed deployment cycle from 2 hours to 10 minutes, enabling true continuous delivery
- Collaborated with Product and Operations leadership to align technical roadmap with revenue objectives; delivered 12+ critical platform capabilities supporting business growth targets

Senior Software Engineering Manager – SaaS Platform | Tuya Infotech

May 2023 – October 2023 | Managed team of 20+ engineers across a healthcare SaaS platform

- Oversaw end-to-end platform delivery across frontend, backend, and cloud infrastructure serving 5,000+ enterprise healthcare customers
- Executed AWS cloud migration strategy, improving platform availability from 98.5% to 99.8% SLA and reducing infrastructure costs by 35%
- Established enterprise-grade CI/CD pipelines and production monitoring frameworks; accelerated feature delivery velocity by 2x while reducing deployment risk

Software Engineering Manager, Level 2 | PayPal Inc., San Jose, CA

October 2011 – May 2023 (11.5 years) | Managed global teams of 10-50+ engineers across multiple product pods

- Directed development of mission-critical payment, onboarding, checkout, and compliance systems processing 100k+ transactions per second, handling \$500B+ in annual payment volume for 300M+ customers across 200+ countries
- Launched 8+ regulatory compliance and international expansion initiatives (UK, EU, Asia-Pacific), directly generating \$100M+ in annual revenue and opening new geographic markets
- Architected GraphQL API platform and reusable component libraries across 200+ engineers; reduced development cycles by 6 weeks and improved engineering productivity by 35%
- Delivered PayPal Shopping hybrid mobile application (React, GraphQL, Swift, Kotlin) reaching 10M+ monthly active users across iOS, Android, and web; maintained a 4.7-star app store rating
- Implemented event-driven Kafka-based architecture enabling 10x platform scaling (10k to 100k+ transactions/second) without architectural redesign; maintained 99.99% uptime SLA
- Engineered observability and operational tooling platform serving 200+ engineers; reduced incident resolution time by 50% and improved fault detection by 40%
- Developed talent pipeline: mentored 15+ engineers into senior and staff engineer roles.

EDUCATION

Master of Computer Science Applications (MCA) • Anna University, India (2006)

Bachelor of Computer Applications (BCA) • University of Madras, India (2003)
